Dane County Health Outcomes of Concern

HOW THE HEALTH OUTCOMES WERE SELECTED

We reviewed the secondary data from our Community Health Status Assessment and looked at health outcomes with concerning morbidity and mortality trends in Dane County. We selected these health outcomes based on if:

1 They are impacted by our Community Health Improvement Plan (CHIP) priorities.

2 There are stark inequities in race, sexual orientation, gender, and/or other group status factors.

3 They impact people across the lifespan, from birth until death.

4 They are in our Community Health Needs Assessment, which gives opportunities for partnership with healthcare.

5 There is momentum, existing work, and capacity to address the health outcomes within our agency.

THE HEALTH OUTCOMES

We'll track, monitor, and strive to improve these health outcomes while addressing our Community Health Improvement Plan (CHIP) priorities.

Birth Outcomes   **Mental Health**   **Overdoses**   **Heart Disease**

CONNECTING OUTCOMES & PRIORITIES

We'll focus on these connections in our CHIP. This diagram is not exhaustive.

Mental Health — Access to Mental Health Care, Housing, Employment, Racial Diversity & Inclusion, Education Equity, Green Space, Food Security

Birth Outcomes

Overdoses

Heart Disease
